

Aquara & the SDGs

Building a transparent financial system for sustainable water management.

Why the SDGs Matter to Aquara

Aquara aligns its mission with the UN Sustainable Development Goals to tackle one of humanity's most urgent challenges — the fair and sustainable management of water.

We use decentralized finance and transparent governance to make water investment more accountable, inclusive, and accessible to everyone. Our focus is on the goals where Aquara can create the greatest impact:

Clean water and sanitation, climate action, strong institutions, and quality education.

4 QUALITY EDUCATION

SDG 4 – Quality Education

Empowering people through knowledge.

Aquara believes real change starts with understanding how water is managed — and how everyone can take part.

What Aquara is doing:

- Creating guides that teach people how to join and vote in Aquara's DAO.
- Funding local projects that raise awareness about water and sustainability.
- Sharing free resources on water, finance, and decentralization.
- Engaging youth to shape the future of water governance.

You can't govern what you don't understand — that's why Aquara starts with education.

6 CLEAN WATER AND SANITATION

SDG 6 — Clean Water and Sanitation

Aquara's mission begins with water.

Access to clean water is a human right — and communities should help decide how it's funded and protected.

What Aquara is doing:

- Building a decentralized water fund where holders vote on water-related investments.
- Using blockchain transparency to track how funds are used.
- Supporting clean water projects that deliver measurable impact.
- Exploring how water reserves and rights can one day be represented on-chain.

Clean water belongs to everyone — and so should its governance.

13 CLIMATE ACTION

SDG 13 — Climate Action

Climate change is making water access harder — through droughts, floods, and pollution. Aquara supports transparent, long-term solutions that protect both people and the planet.

What Aquara is doing:

- Funding projects that strengthen climate and water resilience.
- Using energy-efficient blockchain (Cardano) to stay sustainable.
- Supporting data-driven, transparent decisions for long-term impact.
- Growing a treasury that invests in climate-smart water solutions worldwide.

A stronger climate future starts with resilient water systems.

16 PEACE, JUSTICE AND STRONG INSTITUTIONS

SDG 16 — Peace, Justice & Strong Institutions

Too many decisions around water happen behind closed doors. Aquara believes everyone should have a voice in how vital resources are managed.

What Aquara is doing:

- Building a decentralized system where holders propose and vote on funding.
- Ensuring full transparency — all decisions and spending are tracked on-chain.
- Sharing power through community-led governance, not corporate control.
- Creating open tools for fair and inclusive water decision-making worldwide.

Stronger institutions start with shared transparency and trust.

17 PARTNERSHIPS FOR THE GOALS

SDG 17 — Partnerships for the Goals

The global water crisis can't be solved by one group alone — it takes collaboration between innovators, educators, and communities.

What Aquara is doing:

- Partnering with blockchain builders, water advocates, and educators to drive shared impact.
- Keeping our system open-source and collaborative, inviting global participation.
- Empowering local communities to design and fund their own water solutions.
- Growing within the Cardano ecosystem, grounded in transparency and sustainability.

Partnerships are how Aquara turns vision into global action.

Water is a Right — Not a Commodity

We believe in a future where water is governed by the people and protected for the planet.

Transparent. Decentralized. Accountable.

Aquara is building a global system where finance serves sustainability — and every drop counts toward a shared, resilient future.

“You never know the worth of water until the well runs dry.”

– African Proverb
